Document Collection, Grouping and Summarization

Technology #m03-003

Summary of Multiple Documents with Document Clusters

The system and method for collecting documents, grouping and summarizing them includes a document collection engine that has access to a computer readable document collection database. A cluster processing engine groups related documents and a document summarization engine generates the summary.

Summaries of Multiple Documents

The system and method provides multiple document summarizations of documents from several sources. This would enable a user to browse large quantities of content quickly and efficiently.
