Client-Server Interaction in Interactive Communications

Client-Server Interaction in Communication Systems

These communication systems are based on the MPEG-4 standard.

The system and method for communicating command information between a server and a client comprises of generating a command message. The command message includes a command, a command descriptor, a server route and a command node. The command message upon occurrence of a triggering event is transmitted.

Mpeg for Client-Server Communications

The method and system provide a technique for communicating messages between two entities such as "client" and "server", utilizing the MPEG-4 international standard.
